

About VPI Engineering

Product Development Services

What can VPI do for you?

VPI Engineering provides full turnkey product design and development services and design engineering services for organizations that do not have available engineering resources or that need additional engineering support. VPI has extensive experience in design and engineering for a wide range of projects and products.

VPI's talented staff can provide expertise in electrical, mechanical, software, firmware, and manufacturing engineering and get your product to market quickly. Our contract engineering services help you get projects done, whether the project is turnkey or a component of a larger project.

VPI has helped many companies resolve problems and issues with their current product design or manufacturing solution. Some of VPI's clients first went overseas to design their project cheaply. When that didn't work out for them, they came to VPI to solve their design and manufacturing issues.

Electronic Design Services

One of VPI's core capabilities is electronic design services (EDS). VPI has helped many clients bring new technologies and updated product designs from concept to manufactured products.

Solid, Reliable Product Designs and Engineering

When you need specialized product design and engineering, electronic product design services, additional manpower for an electrical or mechanical engineering team, or just need some extra engineering support for an urgent project, you can count on VPI to help you make your projects successful and your products work.

Professional Engineering Services

Whether your project is large or small, VPI has the resources and engineering teams to help you get your project completed. VPI tackles both complex and simple engineering tasks, and we are certified to ISO:9001:2008 quality standards.

- Product Design and Development
- Prototyping
- Design for Manufacturability
- Product Certification
- Production Testing Equipment
- Electrical Design and Engineering
- Mechanical Design and Engineering
- Firmware Design and Engineering
- Software Design and Engineering
- Manufacturing Design and Engineering

VPI thrives on designing new technology, improving existing technology for our clients, designing next generation products and fixing broken designs. Let our engineers be your design team.
