

## VPI Manufacturing

VPI Manufacturing provides assembly and manufacturing services for products that have high quality, unique, and complicated system requirements. We work with products that require calibration, have lower volume production, and high complexity. As an ISO 9001:2015 certified facility, VPI offers manufacturing services that build upon our core engineering expertise in embedded systems. VPI Manufacturing has built an impressive portfolio of manufacturing projects as well as a diverse client base.

VPI has a dedicated staff with a breadth of technical experience ready to fulfill your needs. We develop assembly drawings, build prototypes, design test fixtures, develop manufacturing plans, train for and implement best production practices, implement QA controls, and insure traceability for all production.

### Unique Capabilities

VPI Manufacturing has the skills and experience to service your manufacturing needs. Whether you require manufacturing process analysis, complex assembly, upgrades, or full turnkey box-build assembly, we have the experience and resources available to deliver! Our project flexibility enables us to adjust to our clients' individual project requirements.

VPI is unique because of our engineering expertise. We bring more to the table than just contract manufacturing. Additional capabilities include:

- Highly-skilled resources in the areas of electrical, mechanical, firmware, and software engineering
- An in-house procurement department
- Project management team
- Testing labs

### Services

- U.S. based manufacturing
- Complete turnkey box-build final assembly
- Product rework and retrofiting
- Procurement and bill of materials (BOM) management
- Calibration dependent assemblies
- Short to medium size runs (in-house)
- Testing
- Prototyping services
- Fulfillment services
- Drop shipping
